

Dr Peggy Parker's testimony on facebook

[Peggy Parker Rangba Stephen](#), as a Naturopathic and Biological Medicine Physician I was introduced to the concept of this type of ionized water about 15 years ago. One of my professors from Switzerland really believed in it. I tried the unit he liked (AKAI) and did not see any positive test results for myself or my patients. So I was very skeptical when a friend told me about Enagic's water ionizer. After a few months I tried it and it was very, very supportive to my health. In fact, I drank 4 16 oz glasses of it during a lecture and all of my pain and fatigue disappeared and stayed that way for 2 full days. That intrigued me so I purchased one the following week and immediately began researching. I have researched every ionizer on the market and have not yet found one that works as well as Enagic's SD501 unit. The main difference between that unit and all others is the number, size and construction of the plates inside the unit. They are the mechanism that creates both the alkalinity and the antioxidant properties which is measured in ORP. Most other units on the market add minerals to create the alkalinity and the ORP readings. These minerals can be quite harmful to your health over time. For a more thorough understanding of water ionization, please watch a little video on my website: <http://www.simplehealthnetwork.com/research.html> or purchase one of my booklets. I highly recommend the one entitled, Turning Back the Hands of Time.
